Storage

Build the foundation that unlocks your data's potential, with our flexible, secure and cost-effective solutions

Benefits

- **Flexible** – We're flexible so that you can be, too. We can store your data in, and enable it to move between, your data centre, ours, and the public cloud
- **Cost-effective** – We help you choose the right storage solutions at the right price
- **Secure** – Security has never been as important as it is today, which is why it's our top priority from planning your storage architecture onwards

Our values

- **Integrity** means that you can depend on us, our solutions, our principles and our actions. We navigate by our own compass based on honesty, trust and transparency
- **Commitment** is the foundation of all our relationships. We formulate clear goals and keep them in focus, always keeping our customer's needs in mind
- **Excellence** is what we contribute and what we build with. Excellence is our essence and with decades of experience under our belt, we have the wisdom to apply it well

Data is valuable

Data is increasingly being analysed to unearth new customer insights, improve processes and/or gain competitive advantage. As a result, the way organisations store their data is changing. As the possibilities of what can be done with data grow, the demands being put on storage are becoming greater than ever. So it's never been more important to make sure your storage is as flexible and cost-efficient as possible.

Why Proact?

Organisations used to only keep their data on-premises. Now, it's more dispersed. Wherever your data is, we can help tie it all together, in a well-thought out architecture. We can do that in a cost-effective way and we can do that in a secure way.

We can help you plan what data to store where. We can help you choose from all the different technologies out there. And we can design and build the infrastructure or solution that's right for your organisation.

Once that's done, we can monitor, manage and support your storage as much or as little as you require. This frees your IT team from managing infrastructure and allows them to focus on your end users or projects that drive your organisation forward. It means you don't have to hire and train for specialist storage skills or employ different shifts to cover 24-hour operations.

We understand that uncertainty is making it hard to plan ahead. That's why we deliver storage that is agile and flexible, so that you can continue to move your data between tiers, clouds and storage systems, no matter what the future brings.

How we can help you

Analysis, strategy and design

There is no single storage blueprint that works for every organisation. That's why we work with you to ask where your data should sit, how should you access it and what technology is required. We align your IT department and your business with a unified data strategy, so everyone's pulling in the same direction. Then we help you select the right technology, data tier, capacity and performance, before designing the foundation you need to unlock your data's potential – a harmonious storage environment where your data is connected and movable.

Flexible deployment options

We can design storage solutions for your organisation's data and services, regardless of where the data is located, or who manages the system. We combine technology and deployment models to fit your organisation's needs the best, whether your data is on-premises, in a private cloud, in the public cloud, or in a combination of them all (multicloud environment). We can manage your solution, or you can manage it yourself. And we offer a variety of different ways to pay, from CapEx to OpEx, short-term to long-term, to suit your needs.

Implementation and service transition

Proact has a well-established process for implementation and managed service transition – and we've honed it over years of delivering services to our customers. This, in combination with our extensive knowledge of the relevant technology, creates a product and service delivery model we can tailor to meet your business needs

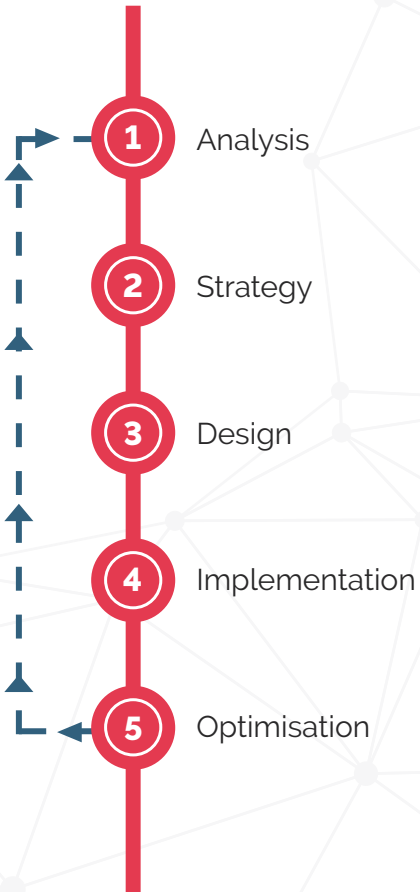
Service Management

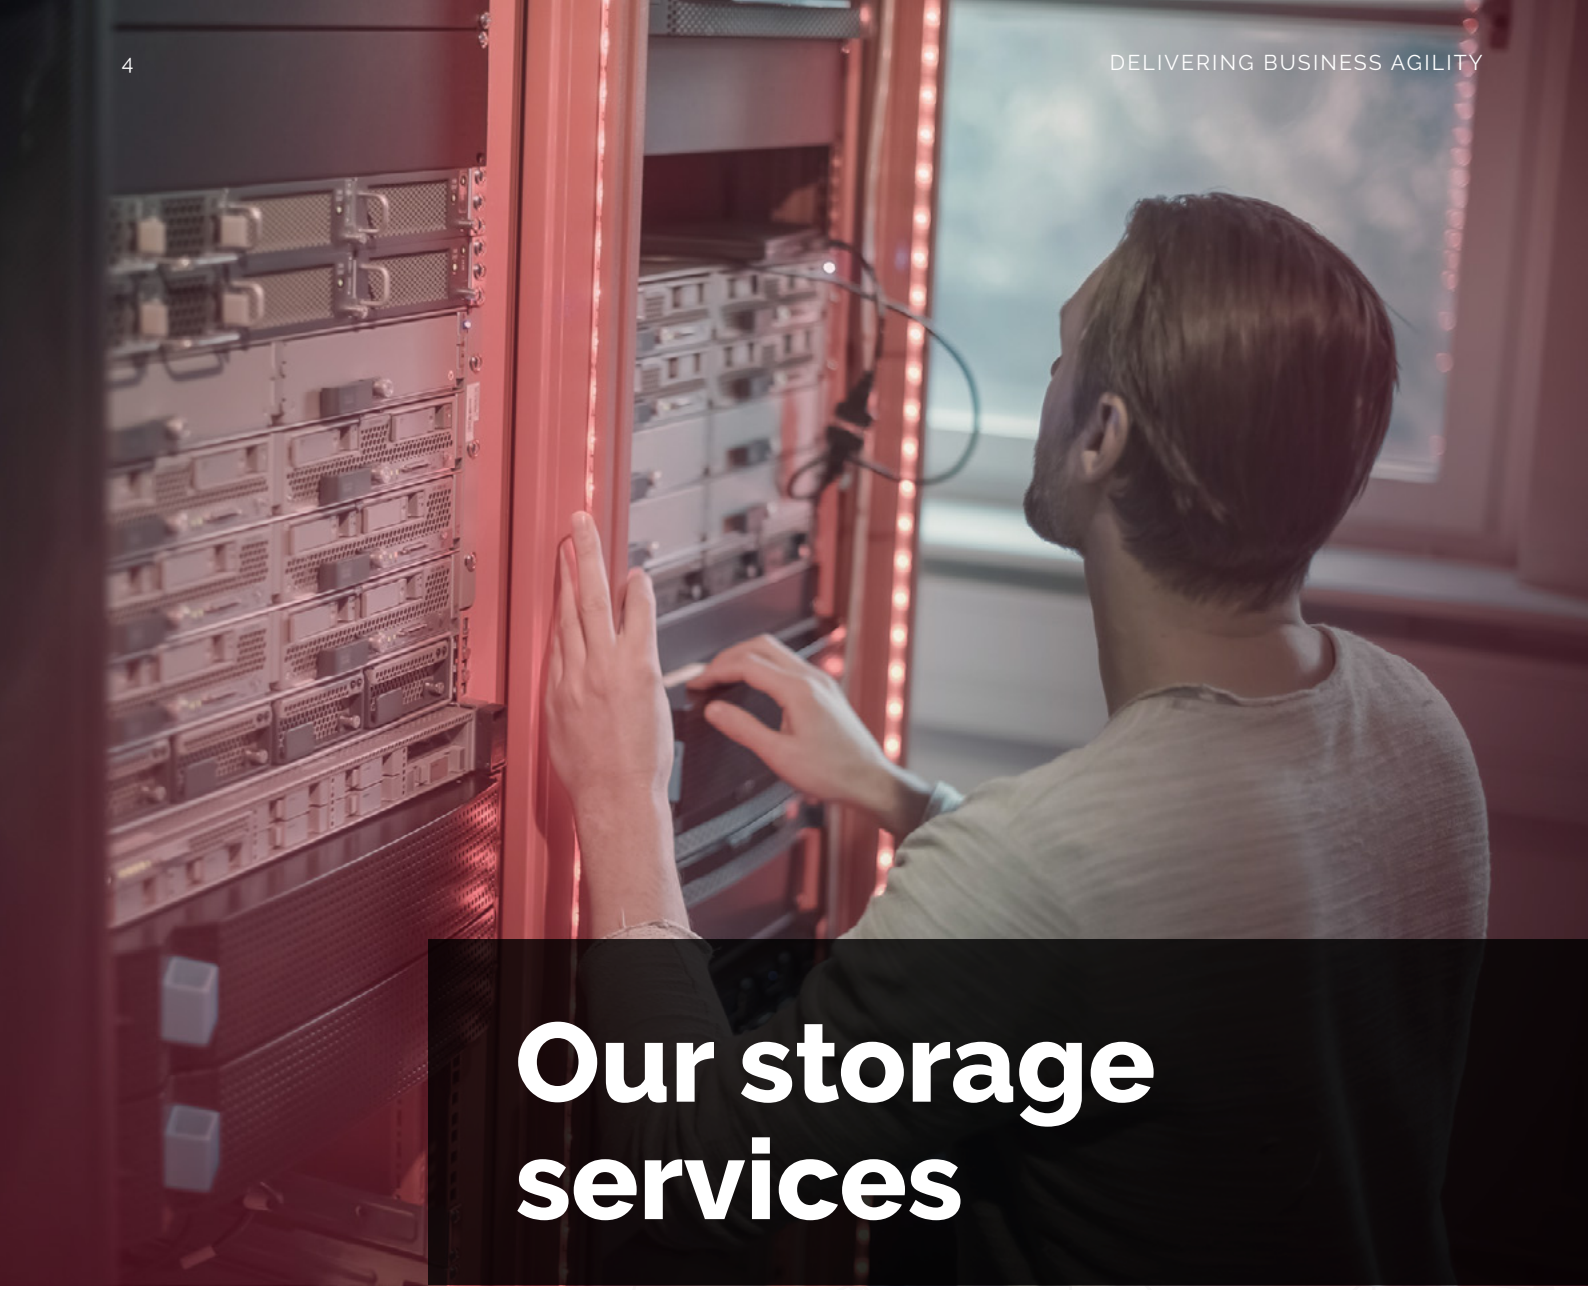
We can support, monitor and manage your storage solution, wherever it is located in the world. We provide simple, clear and realistic service level agreements, along with fair contracts and a single point of contact. We can proactively manage your environment, taking action when thresholds are breached, and recommending changes to your environment where necessary, freeing up your IT team to push your organisation forward.

Support

We offer first line support for several key storage products from market-leading vendors. The supported products vary from country to country, so please contact your local Proact office for more information on how we can support you.

How we transform IT





Our storage services

Location-agnostic storage infrastructure

We work with some of the most renowned vendors in the industry to deliver you infrastructure to store your data in a cost-effective and secure way. It doesn't matter whether that data is on-premises, in a private cloud, in the public cloud or in a combination of them all (multicloud environment).

Your new storage solution will mean that not only will you know where your data is, wherever it is, you'll also know that it is safe and that you can move it and connect it as you desire.

The process begins with analysing your current storage, along with what your organisation needs, before helping you define a data strategy that creates a clear roadmap and gets your IT department and organisation pulling in the same direction. We then design and implement your solution, using tried-and-tested processes that make transition as painless as possible

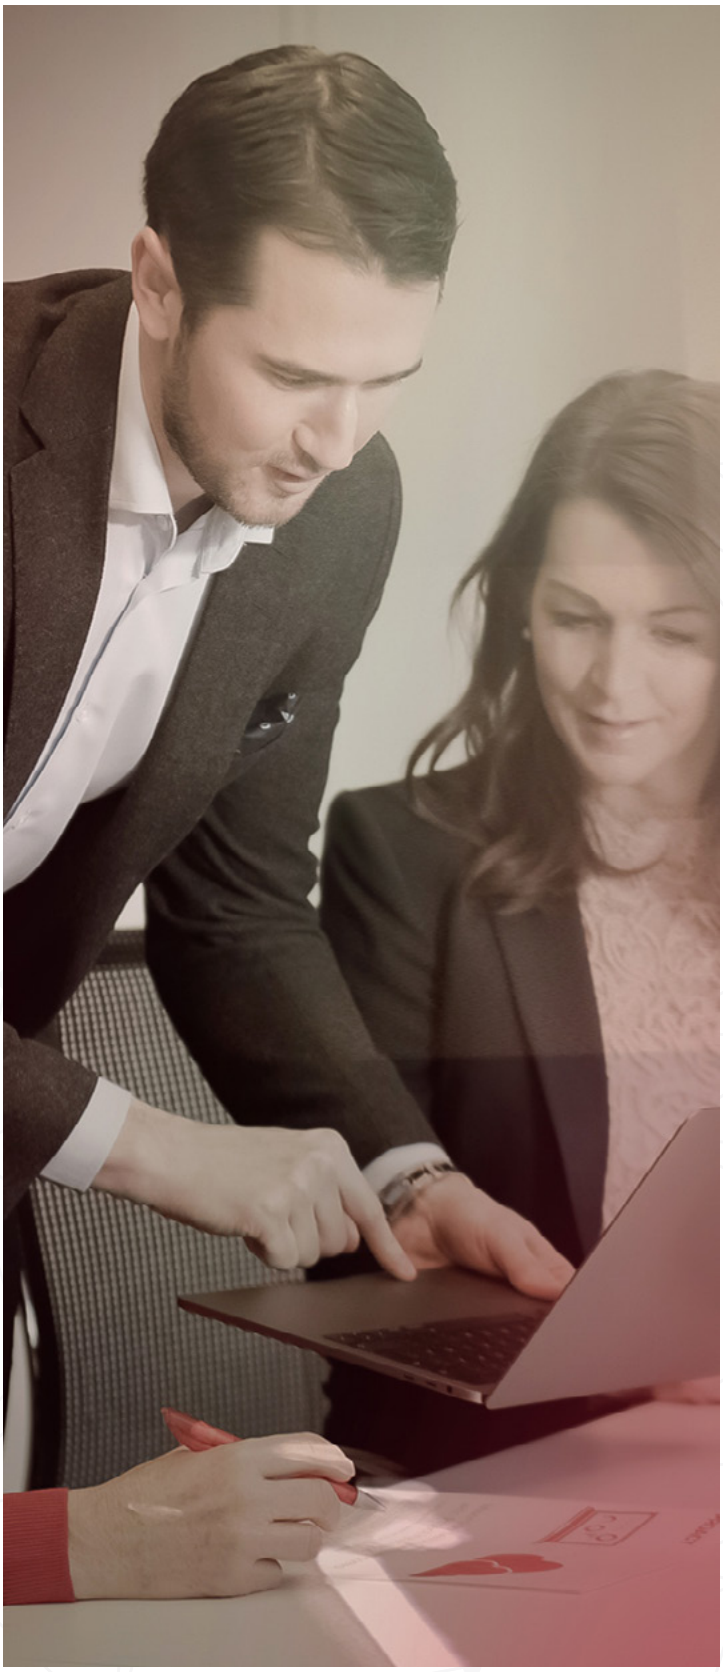
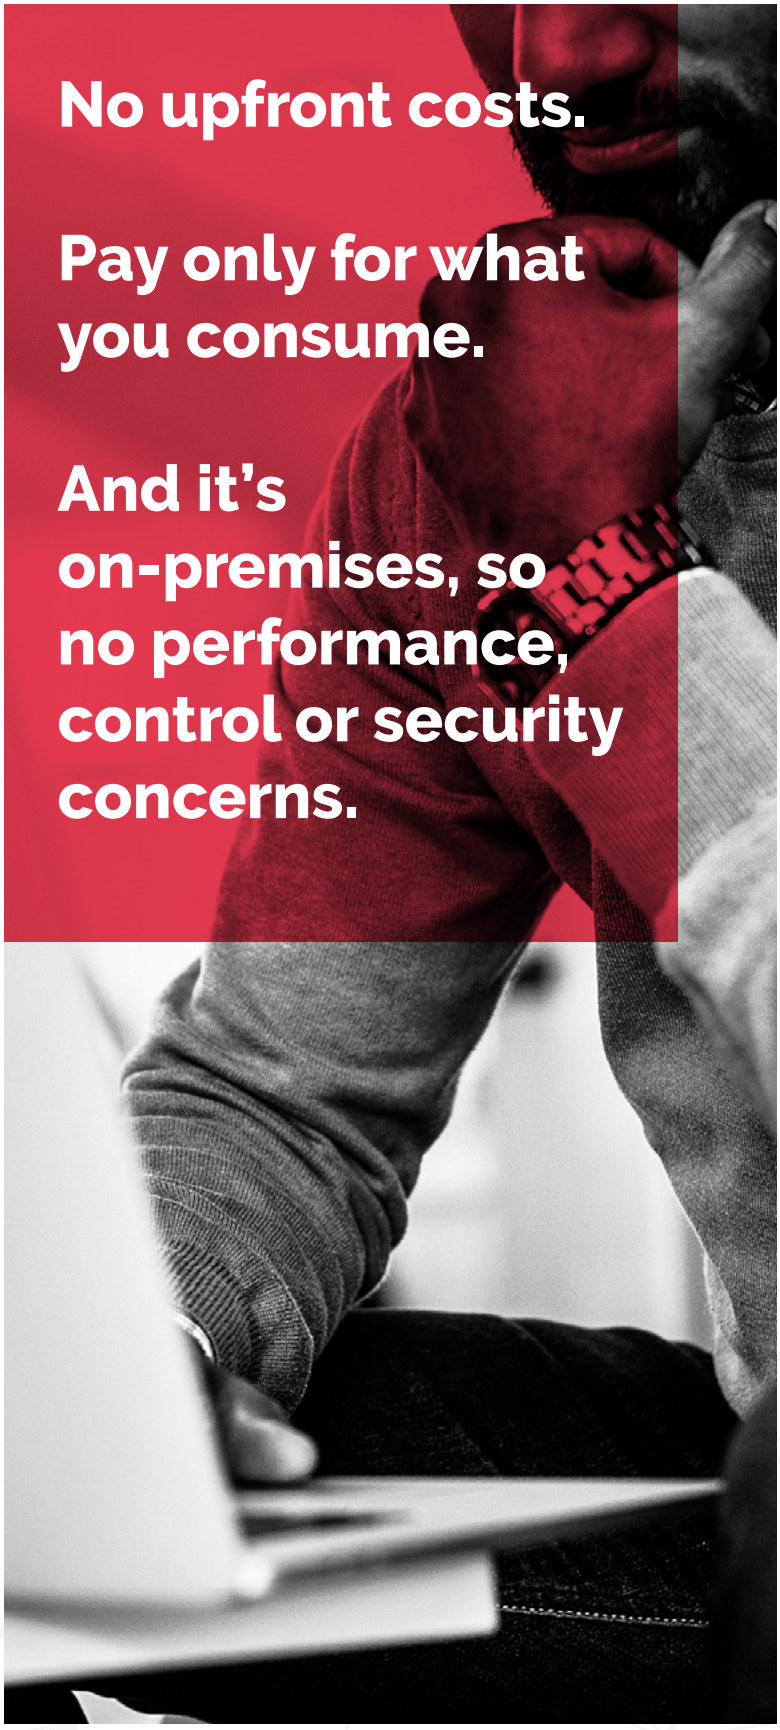
Service Management for storage

Not every organisation needs a new storage solution. They simply need help managing the one that they already have. At a time when everyone is being asked to do more with less, infrastructure maintenance can get overlooked, leading to serious issues in an area of IT that is so fundamental to its smooth running. Hiring and training for storage-specific skills required to support multiple vendors is also very costly. That's why we offer 24/7 storage monitoring, management and support, delivered by storage experts, to help solve these problems.

It means your organisation can benefit from worry-free storage operation and means your IT team no longer has to spend time maintaining infrastructure. As a result, your organisation can become more efficient and more agile because your IT team is free to concentrate on projects that support your end users and drive your organisation's growth.





Storage as a Service (STaaS)

Storage as a Service is a dedicated on-premises storage solution, managed by us, for organisations that want all the benefits of an on-premises cloud, but without the upfront cost of having to purchase the infrastructure, and without the hassle and expense of having to maintain it 24/7, or the worry that your storage infrastructure isn't being maintained properly.

As your data is on-premises, you don't have to worry about availability or latency. It also means your data will comply with data locality, security or data sovereignty policies and/or regulations, whether they come from your own organisation, your customers or from Government legislation. This solution means that you are only paying for the storage you use. It also means that you are able to shift your storage costs from CapEx to OpEx.

The benefits aren't just financial, either. With our skilled storage specialists monitoring, managing and supporting your storage infrastructure 24/7, your organisation doesn't have to hire and train for specialist storage skills. It gets worry-free storage performance and gains agility, as your IT team is freed up to concentrate on projects that drive innovation or help your users.

What else can we help you with?
